

SPEAKERS FOR YOUR LIFE™

# PC60 CA

## CELEBRATING 30 YEARS OF CLASSIC AUDIOPHILE SOUND

Phase Technology®, celebrating 30 years as a leading USA speaker brand, is releasing a new edition of its original speaker, the PC60, in a limited run. The PC60 Classic Audiophile Speaker (PC60 CA) brings back the cabinet design, aesthetics and sound of the original unit.

The 2013 edition of this classic audiophile speaker has the same great sound that was originally hailed by Stereophile Magazine as “balanced and eminently listenable.” Stereophile’s original review also reported “...the PC60 CA does a better job of reproducing hall acoustics than any other small speakers I know of.”

The PC60 Classic Audiophile Speaker uses Phase Technology’s Absolute Phase® crossover to ensure the perfect transition between the 6.5” RPF solid piston driver and the 1” synthetic soft dome tweeter. The two drivers are housed in an extremely rigid, high density enclosure wrapped in wood veneer.

Its preliminary performance specs include a frequency response of 60 – 20,000 Hz + 3 dB and sensitivity at 87 dB of 2.3 v / 1m. The speaker measures 13-1/4” H x 8-5/8” W x 8-1/4” D. Two finishes are available, Oak and Black Oak.

## BIG HAIR, BIG SOUND

Pictured here are the PC60's in the original brochure dated 1983. While the speakers are a timeless classic, sadly the hairstyles aren't.

A limited number of these speakers will be produced at the Phase Technology factory in Jacksonville, Florida, the same factory that produced the original PC60.

Contact your PhaseTech dealer today to place your order for this piece of audiophile history with modern sound.

## KEEPING TRADITION ALIVE

The people who created Phase Technology began building speakers almost 60 years ago as United Speaker Systems (USS). Since then, a lot has changed, both in speaker designs and in listener demands.

USS was founded in 1955 by Bill Hecht and his son Ken to develop speakers and new speaker technologies on an OEM basis for some of the world's leading audio companies. The Hechts launched the Phase Technology brand in 1983 to take advantage of their key inventions, some of which are now in everyday use throughout the speaker industry. Inventions by the Hechts include the soft dome tweeter, VDT® Vapor Deposited

Titanium woofers, self-damping voice coils, uniframe woofer construction, solid piston drivers and improved mounting systems, and have been incorporated throughout the PhaseTech line. Phase Technology was later acquired by MSE Audio. Ken Hecht now manages R&D, not only for Phase Technology, but for all of MSE Audio's speaker brands.

With nearly six decades of design and engineering innovation, Phase Technology designs and builds speakers to meet a wide variety of lifestyles. Our broad product line includes audiophile-grade tower and bookshelf speakers, wireless surrounds, subwoofers, flush-mount speakers for whole-home audio, outdoor

speakers, CineMicro miniature home theater speakers, pendant speakers for open-ceiling use, and the advanced dARTS (digital Audio Reference Theater System). No matter what your needs, we build Speakers For Your Life™.

Phase Technology is an MSE Audio company. Other MSE Audio brands include Induction Dynamics®, Solid-Drive®, Rockustics® and SoundTube Entertainment®.
